

layer weights

split into crossbars
(128×128 CBs)

pack

tile: c CBs, grouping (r, s)

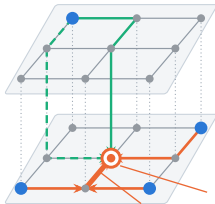

r : reduction kept on-tile
 s : inputs shared

map

sender
tiles

routing: choice among legal paths

tiles mapped on the 3D NoC

delay and p99 track $\mathbf{BIND} = \max(\mathbf{PF}, \mathbf{PL})$: below the floor the **pack-**
ing controls delay, above it the **mapping** does, and **adaptive routing** pays near the knee.
